## Problem: Display weights

### Without Array:

```
int weight1 = 6;  
int weight2 = 3;  
int weight3 = 2;  
int weight4 = 5;
```

```
System.out.println("Weight of #1 = " + weight1); // 6  
System.out.println("Weight of #2 = " + weight2); // 3  
System.out.println("Weight of #3 = " + weight3); // 2  
System.out.println("Weight of #4 = " + weight4); // 5
```

### With Array:

```
int weight[] = new int[4];  
weight[0] = 6;  
weight[1] = 3;  
weight[2] = 2;  
weight[3] = 5;
```

```
System.out.println("Weight of #1 = " + weight[0]); // 6  
System.out.println("Weight of #2 = " + weight[1]); // 3  
System.out.println("Weight of #3 = " + weight[2]); // 2  
System.out.println("Weight of #4 = " + weight[3]); // 5
```

## Problem: Display weights

### Without Array:

```
int weight1 = 6;
int weight2 = 3;
int weight3 = 2;
int weight4 = 5;

System.out.println("Weight of #1 = " + weight1); // 6
System.out.println("Weight of #2 = " + weight2); // 3
System.out.println("Weight of #3 = " + weight3); // 2
System.out.println("Weight of #4 = " + weight4); // 5
```

### With Array: Array Initializer

```
int weight[] = { 6, 3, 2, 5 };

System.out.println("Weight of #1 = " + weight[0]); // 6
System.out.println("Weight of #2 = " + weight[1]); // 3
System.out.println("Weight of #3 = " + weight[2]); // 2
System.out.println("Weight of #4 = " + weight[3]); // 5
```

## Problem: Display weights

### Without Array:

```
int weight1 = 6;  
int weight2 = 3;  
int weight3 = 2;  
int weight4 = 5;
```

```
System.out.println("Weight of #1 = " + weight1); // 6  
System.out.println("Weight of #2 = " + weight2); // 3  
System.out.println("Weight of #3 = " + weight3); // 2  
System.out.println("Weight of #4 = " + weight4); // 5
```

### With Array: Array Loop

```
int weight[] = { 6, 3, 2, 5 };  
  
for(int i=0; i<weight.length; i++) {  
    System.out.println( weight[i] );  
}
```

## Problem: Display total weights

### Without Array:

```
int weight1 = 6;
int weight2 = 3;
int weight3 = 2;
int weight4 = 5;

int total = weight1 + weight2 + weight3 + weight4;
System.out.println("Total = " + total); // 16
```

### With Array: Array Loop

```
int weight[] = { 6, 3, 2, 5 };
int total = 0;

for(int i=0; i<weight.length; i++) {
    total = total + weight[i];
}

System.out.println( "Total = " + total ); // 16
```

# Character Array

```
char name[] = {'Z', 'a', 'k', 'a', 'r', 'i', 'a'};
```

```
System.out.println(name); // Zakaria  
System.out.println("I am " + new String(name));  
System.out.println(name.length); // 7  
System.out.println(name[2]); // k
```

# String

```
String name = "Zakaria";
```

```
System.out.println(name); // Zakaria  
System.out.println("I am " + name);  
System.out.println(name.length()); // 7  
System.out.println(name.charAt(2)); // k
```

# Two Dimensional Array

chess[0][0]

Index: [row][column]

```
int chess[][] = new int[8][8]
```

chess[6][5]

# Three Dimensional Array

[0][1][0]
